# A Social Divide in the City

Annual FTSE 100 social media performance index

Ninth edition

Strategic Communications

# Executive Summary

Welcome to the ninth edition of our Social Divide in the City report in which we share our analysis of results reporting on social media by FTSE 100 companies throughout 2020. In a turbulent year we found consistent growth and investment into financial results content from some of the world's largest companies. Our rankings have changed to reflect a new set of leaders, though the range of sectors has remained consistently broad. Counting over 1,000 full- and half-year results posts across the primary social media platforms we found that the patterns we identified in previous years have continued to evolve – particularly in relation to quality content and the increasing dominance of LinkedIn as a tool for reaching financial audiences.

Companies sought to tell the story of their results and strategies in ever more compelling ways, while also illustrating the ways in which the global pandemic was impacting on business. This resulted in 2.6m engagements for all results-related activity in 2020, a 33% increase year on year. As we reported on last year, audiences are frequently triggered to respond, with many increasingly focused on environmental, social and governance (ESG) aspects of a company's reporting and story.

The biggest shift in direction this year relates to the role that leaders are playing in communicating results-related messaging directly – and generally news and updates from their businesses overall. Leaders are increasingly at the front and centre of results content – we reference some of the CEOs using their own personal channels to deliver financial results content, alongside their company channels.

Together with the set pieces around leaders and strategy, results content is becoming more tailored and targeted. The increase in the use of semi-private content, unlisted YouTube results videos, geo-targeted posts on LinkedIn and dark social ads, for example, demonstrate that companies recognise that there is no one-size-fits-all approach. While still rare, we identified instances where FTSE 100 constituents didn't share financial results data on social media at all, focusing instead on the surrounding narrative. This 'softening' of results content continues to remind us that behind every financial data point there is a social media-worthy story of strategy, leadership – and a workforce delivering results, sometimes against the odds.

# Research overview

FTI evaluated the social media content shared by every FTSE 100 constituent in relation to full- and half-year results in 2020. We reviewed the content that was published by official company channels on the four platforms we consider to be the most relevant to corporate and financial communication – Twitter, LinkedIn, YouTube and Instagram.

Results-related activity was measured using our longstanding metrics of Volume, Quality and Impact. Scores were given for each metric, which in turn generated an aggregate score.

More information on the methodology can be found on page 15.

# Index ranking methodology

Volume

Number of results-related content: tweets, LinkedIn and Instagram posts, YouTube videos

**Quality** 

Overall quality of results-related content, including consistency, visual appeal, user experience

**Impact** 

Interactions with results-related content, including: retweets, shares, comments, reations, video views

# Leading the Divide

The last year was marked by a new clear divide, in our view, between companies which have Social CEOs who support their financial results on social media and those who do not.

A recent FTI research study,
Leading from the Front:
Successful Strategies for the
Social CEO analysed over 3,000
social media posts to find the
best approach for becoming a
successful Social CEO. As part
of this research we identified
that more FTSE 100 CEOs than
ever before are supporting their
companies' financial reporting
through their own personal
social media channels.

#### **Leadership impact**

Results content from CEOs analysed as part of our recent study had a significant impact on the overall reach and engagement of their companies' financial results, receiving an average of 541 engagements per post. On LinkedIn specifically, this figure was even higher, with results posts receiving an average of 675 engagements per post.

Not only was financial results content from the CEO invaluable for the company's communication, it also formed an important part of the content mix of some of the most successful Social CEOs. Our analysis found that four out of five of the most engaged with Social CEOs in the FTSE 100 (Bernard Looney (BP), Bill Winters (Standard Chartered), Steve Hare (Sage) and Ben van Beurden (Shell) shared content around financials results.

#### **Bringing the energy**

Bernard Looney and Ben van Beurden stole the show, in our analysis, with the highest levels of engagement for their financial results posts. Both of them shared authentic piece-to-camera videos talking through the results as well as their broader commitments to employees and communities. As video continues to play a key role in corporates' financial reporting, its impact is extended when leveraged by CEOs for their own social channels.

However this approach was a rarity with most CEOs simply sharing a link to their results landing page – a finding we expect to change in the future.

The world has fundamentally changed over the last few months. As we report the #ShellResults for the first quarter of 2020, we are working hard to ensure the resilience of our business. Under extremely challenging conditions, we are stepping up to protect our people and support communities around the globe. By demonstrating resilience, and by responding thoughtfully and swiftly, we will get through this together. You can see more details in our latest video with CFO Jessica Uhl. Please stay safe, healthy and look after each other.

These are difficult and extraordinary times. We are working hard to ensure the resilience of our business and focusing on safe and reliable operations each day. Hear from Shell CEO Ben van Beurden & CFO Jessica Uhl ## ShellResults https://lnkd.in/emHRMXW

+ Follow

#### A personal note

Highlighting the hard work and dedication of employees that enabled the financial performance was a further common theme. By extending a personal thank you these CEOs demonstrated a key benefit of an active social media presence, in being able to reach and connect with, stakeholders directly.

It's now five months since the Coronavirus pandemic took hold, bringing with it substantial changes to the way we support our customers and the way we work.

Today's publication of our half year results shows the impact the pandemic is having. While our underlying business is resilient, reporting pre-provision profits of £2.1bn, an impairment provision of £2.9bn due to coronavirus, has resulted in NatWest Group posting a loss of £770m.

While it's always difficult to announce a loss, we have a clear societal responsibility to be there for our customers through the good times and the bad.

#### **COVID** context

The top performing CEO results posts all highlighted the difficulties of Covid-19 both in terms of its impact on society, employees and the business. Utilising their personal channel enabled these CEOs to give more personable and authentic context to these challenges, which was well received by the audience.

all of our Pearson colleagues have shown through the pandemic will ensure the company is well placed to emerge from it in a stronger competitive position.

# Highlights

#### The Covid-factor ▶

As with leaders' content, results posts shared from corporate accounts prominently featured Covid-19. The pandemic was used to explain financial performance and to highlight the initiatives that companies undertook in 2020 to help the global battle against the pandemic. This contributed to broader 'softening' and diversification of results content.

#### 'Softening' of results

Results content is no longer restricted to financial statements and data. In fact, a small number of FTSE 100 companies, including BP, didn't share any financial information on social media on results day, focusing on overarching business messages instead. Even though the approach above is still rare, most of the best performing companies 'softened' their results content, mixing financial information with broader messages around purpose, resilience, and long-term vision. In addition, some companies used this moment in their financial calendar to thank employees.

+ Follow · · ·

"Though the momentum we had built was disrupted by COVID-19 at the start of the year, we were quick to adapt, while making further progress against our strategy. While the virus continues to impact sales in EMEIA, Japan and South Asia Pacific, we are encouraged by our overall recovery and the strong response to our brand and product, particularly among new and younger customers. In an environment which remains uncertain, we will continue to deliver exceptional product, localise plans and shift resources, while leveraging the strength of our digital platform to inspire customers." - Marco Gobbetti, Chief Executive Officer

Read our interim results for HY20/21: http://www.brby.co/94q

#### **Native video sharing**

In 2020, 27% of companies that utilised social media for financial results uploaded at least one results video directly to LinkedIn. For Twitter this figure was even higher, at 30%, a 21% increase in comparison to 2019. It's no surprise that companies are increasingly opting for native video sharing. Social media platforms prioritise native videos and make them more engaging and easier to view than linked YouTube content. In our view, YouTube still has a role to play in corporate digital communications – it's better placed to host longer-form content and has benefits for SEO - therefore this platform should still form part of the overall strategy.

# Trend-watch

As we look forward to the tenth edition of our Social Divide report in 2021 there are a number of trends we are expecting to impact results reporting on social media over the next year.

#### **Audience-led activity**

In 2020, a growing number of FTSE 100 constituents waved goodbye to 'one-size-fits-all' social media content and adopted a more tailored and audience-centric approach to results online. During our research we identified, unlisted YouTube videos, geo-targeted posts, ephemeral, or temporary, content, as well as a growing number of targeted paid campaigns.

Enabled by improving platform functionality, new techniques and strategies are allowing companies to reach specific audience groups with tailored messages. We expect this trend to continue in 2021, particularly as we see more audience and social media fragmentation.

#### **Robo-surveillance**

We are increasingly interested in the role of AI, natural language processing and robo-surveillance in relation to how earnings calls and other financial calendar events are being monitored and assessed for nuance. Technology, already in use, will impact how corporates view and plan for earnings calls and broader capital markets activity, where every word of spoken or written language can be trigger a response.

In many ways anticipating these robo-elements means investing in good content, and rehearsing leaders – essentially nothing new – and in our view attempting to outsmart AI is futile. Of course, it will be critical to watch for developments and to understand more about who – or what – is listening.

#### **Retail investors**

The power of social media to amplify price movements has been in the spotlight with Reddit's r/WallStreetBets forum and users of other social media platforms encouraging a new generation of retail investors to come forward.

With available cash, spare lockdown time and simplified access to trading platforms, this new tribe of private investor will create challenges for corporates who are considering the role that social media should play in new forms of investor relations. In particular, as bulletin boards and gossip exchanges ramp up interest, companies will need to remain abreast of these emerging trends and new threats to reputation.

# Top performers by platform

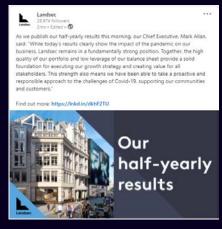

As in previous years, top performing companies tended to utilise more than one platform for results content and use Twitter and LinkedIn particularly well. The content shared by Land Securities Group for the company's HY 2020 results, shown below, is a good example of how companies can adapt core messages and assets for different platforms.

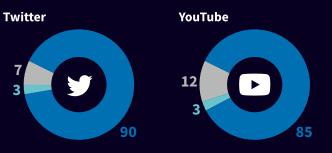

LinkedIn ▶

Twitter ▶

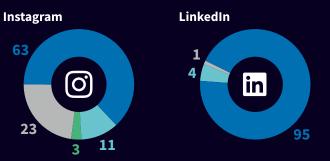

### How many FTSE 100 companies are on each platform?

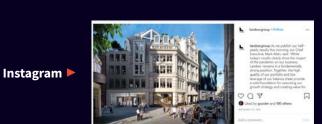

Instagram and LinkedIn gained FTSE 100 users in 2020 - 10 and 5 additional companies started actively using Instagram and LinkedIn, respectively.\* Twitter usage among FTSE 100 constituents remained stable at 90 active companies, and YouTube lost two active FTSE 100 channels

Active Private Inactive No presence

<sup>\* 3</sup> Instagram FTSE 100 accounts are private and their activity status is therefore unknown. For this reason they are excluded from the statement above.

# Methodology

FTI Consulting completed the research between June 2020 and January 2021. The team analysed the channels and feeds of all companies that were in the FTSE 100 in June 2020, on four social media platforms most relevant to corporate communications and financial results reporting:

1.Twitter

2.LinkedIn

3.YouTube

4.Instagram

We recognise that FTSE 100 companies' digital performance is influenced by spikes in corporate activity as well as broader global agenda, and that no month is equally significant for all 100 companies. Therefore we analysed corporate feeds at a universally critical time – during the full and half year results announcements. FTI's analysis focused on three components of results-related social media content published by FTSE 100 companies seven days before, on the day, and seven days after their results announcements:

**Volume** The number of tweets, LinkedIn posts, YouTube videos and Instagram posts

**Quality** Overall quality of all results-related content

**Impact** The number of retweets, likes, shares, comments and other interactions with the recorded tweets and posts.

Every company was attributed three scores, one for each of the components above. Each of the three scores were then ranked, to provide a score between 100-1 for each organisation. These scores were then indexed which in

turn generated an aggregate score. The feeds of official corporate Twitter, LinkedIn, YouTube and Instagram accounts were analysed for this research. If a company did not have a corporate account, general company accounts were identified and analysed.

The research is based solely on publicly available online information; no interviews were conducted for this report. As outlined in the report, in 2020, we saw an increasing number of results posts published from business leaders' accounts, as well as results content that was targeted (e.g. not available to users outside of certain geographies), semiprivate (e.g. dark paid ads), or ephemeral (e.g. Stories). These types of content were noted in our research and analysis, however this type of content was not included in our ranking methodology.

#### **About Us**

FTI's London-based Digital and insights practice partners with FTSE 100 and other large corporate brands to design effective online reputation management strategies, driven by data and analytics and covering issues and crisis communications, influencer identification and outreach, content and channel strategy, paid and creative campaigning. We work with clients at all stages of digital maturity, from early-stage setup, requiring governance, social media architecture and content planning, to expert in-house digital teams requiring contingency or specialist support.
